# British Standard Compliant First Aid Kits

## ***Complying with BS 8599-1, Workplace First Aid Kits***

In recognising the need to ensure that current workplace first aid provision is adequate and appropriate The British Healthcare Trade Association has been working with the British Standards Institute (BSI), to create a new British Standard for first aid kits in the workplace.

These enhanced kits are based upon the minimum requirements set out by the Health & Safety Executive (HSE) in their approved code of practice L74. The contents of these new kits take into account more modern and functional products encompassing a wider range of common workplace risks and are therefore more comprehensive than the previous HSE compliant kits.

BS 8599-1 is the standard that sets the new minimum level that workplace first aid kits should conform to.

Although the HSE has not yet published a revision to the L74 guidelines, it has undertaken to do so at the earliest opportunity and this will refer to the new British Standard BS 8599-1.

The new standard like the previous L74 code of practice gives recommendations on the amount and size of the first aid kits necessary for the different workplace environments based on the category of risk and number of employees in the workplace.

Should the risk or numbers of employee deem it necessary the minimum contents as set out in the standard can be supplemented by additional items appropriate to the hazards identified by the risk assessment. This may result for example in increasing the number of burn dressings where a significant risk of a burn injury is likely.

## What has changed ?

Increased number of disposable gloves, which are now required to be nitrile. Eliminating possible latex allergies whilst being far more dextrous than vinyl gloves.

Introduction of clothing cutters, to cut bandages and remove any clothing from around the wound

Decreased number of Triangular Bandages, as they are no longer used for the immobilisation of limb injuries.

Introduction of an eyewash bottle for travel kits, ideal for drivers where dust or pollen gets in the eyes or in the event of a chemical splash where access to running water is not readily available.

Introduction of smaller absorbent wound dressings for finger injuries, where a plaster just will not cope.

Introduction of a resuscitation face shield, providing a protective barrier for first aiders administering mouth to mouth resuscitation.

Introduction of tearable non woven, hypoallergenic adhesive tape to secure bandages without using safety pins.

Introduction of a heat reflecting foil survival blanket, designed to keep the casualty warm in cases of clinical shock or exposure to cold temperatures.

Introduction of water based sterile gel burn dressings which do not require any pre-cooling with water and a conforming bandage to secure it.

Introduction of sterile saline wipes replacing the alcohol free wipes. These can now be used on broken skin.

## What size kit do I need?

The size of the kit required is dependent on a combination of the level of risk and the number of employees in the workplace. The table below provides guidance for employers but does not replace the requirement to carry out a risk assessment.

This table is for guidance only and each workplace needs to evaluate its own level of risk.

Category Of Hazard	Number Of Employees	Number & Size of First Aid Kit
<b>Low Hazard</b> – e.g. shops, offices, libraries	Less than 25	1 Small Kit
	25-100	1 Medium Kit
	More than 100	1 Large Kit per 100 employees
<b>High Hazard</b> – e.g. light engineering and assembly work, food processing, warehousing, extensive work with dangerous machinery or sharp instruments, construction, chemical manufacture, etc	Less than 5	1 Small Kit
	5-25	1 Medium Kit
	More than 25	1 Large Kit per 25 employees

Special circumstances also need to be considered such as remoteness from medical services, special hazards such as the use of hydrofluoric acid and sites with several buildings. In these situations there may need to be more first aid kits than set out in the table

# **evolution**

series

## The UK's Number 1 First Aid Kits

*The Evolution Series continues to be the market leader when it comes to first aid kit design and content. Developed specifically for the UK and meeting British Standard Compliant requirements, they are designed with your organisation's needs in mind.*

*With flexibility, style, functionality and durability, the Evolution Series is the only first aid solution you will ever need.*

**Evolution cases  
are made in the  
UK**

### Range

First Aid Points featuring the following kits:

### Key Features

**Unique Brackets** - That allow the kits to be fixed safely and securely against a wall/fixed object, with an easy release mechanism.

**Kit Shelves** - That allow easy access to contents when a kit is fitted against the wall. Shelves are both adjustable and removable.

**Highly Visible Signs** - Photoluminescent signs which identify First Aid Points in dark or smoky conditions.

Shelves Included  
in Medium & Large  
Evolution Plus Kits

### Integrated

Evolution Series components fit together using a flexible bracketing system that holds each kit safely and securely. You can add more kits to your First Aid Point at any time.

### Durable

All Evolution Series cases are made in the UK from tough and durable injection moulded plastics guaranteeing they perform when you need them most.

### Portable

Evolution Series kits can be used on their brackets or easily removed and taken to a casualty location.

### Recognisable

Evolution Series Kit bracket labels identify the location of each kit and instantly establish if any kit has been removed and not replaced.

# Evolution Antimicrobial British Standard Compliant First Aid Kits

The Evolution Antimicrobial range is a new series of first aid cases from Safety First Aid impregnated with SteriTouch®. It is designed to reduce the growth of harmful organisms such as bacteria, mould and fungi on the surface of the case, shelves and wall bracket.

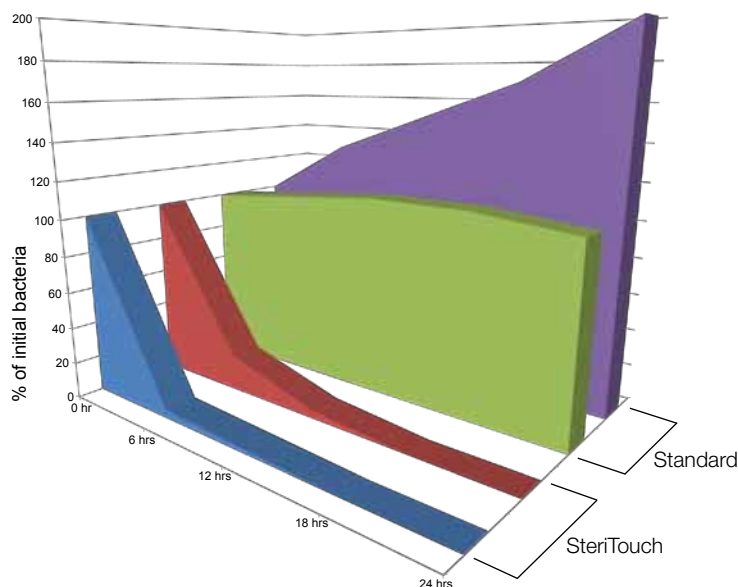

The Evolution Antimicrobial range works by adding the SteriTouch® masterbatch additive to the injection mould during the manufacture of the cases. This additive provides the case with an invisible coating that is effective against a wide range of organisms including bacteria such as MRSA, E-Coli, Salmonella Enteritidis and Listeria by utilising the natural sterilising properties of silver.

The antimicrobial additive used in the manufacture of the cases has EFSA, EPA and FDA registration and is notified on the European Biocidal Products Directive.

All Evolution Antimicrobial First Aid Kits are compliant with BS 8599-1.

**Reduce the spread of bacteria with Evolution Antimicrobial.**

# Motoring Abroad

## Know What You Need!

When driving abroad it is essential that you carry the correct equipment in your vehicle.

These requirements vary across Europe, and failing to meet them can result in an on-the-spot fine.

If you will be travelling through a number of European countries it is important to ensure that you carry everything, needed to meet the regulations in each country you visit.

### Din 13164 European Motoring First Aid Kit

Vehicle first aid kit that meets EU travel requirements

**Required in Germany**

- + DIN Vehicle First Aid Kit is an essential item when travelling abroad to ensure that you comply with the majority of European countries laws which state all vehicles must contain a first aid kit, (DIN13164 Specification) is compulsory in Germany

Code	Description	Cat.	Price £
642-K520	Din 13164 Motor Kit, 25x18x7cm	B	16.95
642-K509	Din 13164 Motor Kit Refill	B	13.95

### Motoring Kit

Ideal driving abroad and in the UK

- + Contains essential equipment for any car journey
- + Complies with the requirements for driving in most European countries
- + Contains a Driving First Aid Kit BS 8599 Compliant as well as:
  - + Warning Triangle
  - + Hi-Visibility Waistcoat
  - + BC Fire Extinguisher (600g)

# Defibrillator Training

# 1/2 Day

Nearly 200,000 people die each year as a result of Cardiac Arrests, the majority of whom develop ventricular fibrillation – a life-threatening abnormal rhythm of the heart. An Automated External Defibrillator, operated by a trained user, can raise the chance of survival by 75%.

## Who Should Attend?

This half-day course is only available to:

- Those who currently hold a valid First Aid at Work certificate and requiring training or refreshing in the use of an Automated External Defibrillator (AED)
- Medical professionals such as nurses or doctors who wish to refresh their skills.

## Course Content

The defibrillator training follows current Resuscitation Council (UK) guidelines and delegates can be trained in the use of an AED in only a few hours. Delegates will receive thorough training in the following:

- Resuscitation
- Safety & legal aspects of defibrillation
- Life threatening cardiac rhythms
- Application and practical training in the use of the AED

## Completion Certificate

On successful completion of the course, the delegate will receive a certificate of attendance.

## On-site Training

On-site training means you can choose the times during which courses are conducted to suit your organisation's requirements. The course can also be delivered over the weekend. Contact us to discuss your requirements.

## Course Prices

Open Courses in Consett £45(ex vat) per person

Onsite Training Available-please call for prices

## Cardiac Science Powerheart AED G3

**The Powerheart AED G3 Plus is the flagship Cardiac Science AED (automated external defibrillator), complete with RescueCoach and CPR metronome to pace chest compressions. The AED G3 Plus is Rescue Ready in an emergency.**

The Powerheart AED G3 Plus was chosen as the 'Sole AED of choice' for Phase 2 of the National Defibrillator Programme, by the National Heart Foundation in partnership with the Department of Health.

### AED Features

- ✦ The Powerheart AED G3's Rescue Ready technology self-checks all main AED components (battery, hardware, software, and pads) daily. The AED completes a partial charge of the high-voltage electronics weekly, and a full charge monthly and advises if there are any problems. This assures first time, every time shock delivery.
- ✦ AED G3 Plus RescueCoach, has intuitive voice prompts to guide the rescuer confidently and easily through the rescue process and provides all instructions, plus CPR metronome pace chest compressions.
- ✦ The AED G3 Plus calculates electrical impedance and if a second shock is necessary, our proprietary STAR biphasic technology escalates the energy to deliver therapy at an appropriate, higher level.
- ✦ The AED G3 has a 4-year full battery operational replacement guarantee
- ✦ Warranty: The AED has a 7-year warranty

### AED Benefits

- ✦ Reliability – The AED is RescueReady whenever it is needed
- ✦ Simplicity – Almost anyone can use the AED
- ✦ Reassuring – The AED knows when to (and when not to) deliver the shock so users don't have to worry about "doing it right".
- ✦ Comprehensive – The AED text screen is helpful in noisy and chaotic environments.

## Lifeline AED Defibrillator

Designed to be "future-proof" to meet any future legislation changes

- Proven to be extremely effective at defibrillating patients in ventricular fibrillation - the most common form of Sudden Cardiac Arrest - on the first shock
- Designed for speed and simplicity
- Automatically performs extensive internal self tests
- An indicator gives reassurance that the unit is in perfect working order
- A visible and audible alarm provides a warning if any faults are detected

## Water-Jel Burns Treatment?

## Twice As Effective As Other Leading Brands

1. No pre cooling with water necessary, as required by the BS 8599 protocol.
2. Water-Jel dressings are a patented non adherent dressing with more gel to provide enhanced performance over similar products.
3. Burns are cooled through convection, meaning there is not risk of treatment induced hypothermia.
4. Gel is specifically designed to arrest burn injuries and halt the progression through skin tissue
5. Water-Jel contains bacteriostatic properties that form a barrier between the burn site and the surrounding air. Risk of secondary infection is therefore greatly reduced.
6. Clinically shown to be 80% more effective than other gel based burn dressings available.
7. Can be used on any thickness of burn (1st, 2nd and 3rd degree).
8. No temperature controlled storage necessary.

### For smaller burn areas use BurnJel.

BurnJel is available in three sizes for ease of application and contain a water-soluble gel formulation to rapidly cool and arrest burn injuries.

**Only dressings in UK for treating, superficial, partial and full thickness burns**

### Water-Jel Burn Dressings

**WATERJEL**

**Conforms to BS 8599-1 requirements for burns dressings**

D8093

D8091

D8090

D8092

#### The ultimate burns treatment

- Patented Water-Jel sterile dressings are easy to carry, store and use
- Medical grade non-woven dressing is saturated with a scientifically formulated cooling gel
- Immediately cools the burn and begins to halt its progression whilst providing relief to the casualty
- Also protects against airborne infection
- Dressings do not stick to the wound and can be applied directly over clothing

Code	Description	Size	Cat.	Price £
642-D8090	Water-Jel Burn Dressing	5x15cm	D	4.65
642-D8091	Water-Jel Burn Dressing	10x10cm	D	5.95

642-D8093	Water-Jel Burn Dressing	20x45cm	D	18.50

### Water-Jel Face Mask

**WATERJEL**

#### Unique design provides on the spot treatment

- The face is the most important area to protect from burn injury. It houses your five senses as well as your identity!
- Non-woven dressing is saturated with cooling gel to immediately provide relief to the casualty and halt the progression of the burn
- Includes cut outs for eyes, nose and mouth
- Large enough to cover the ears and a large part of the neck
- The gel is harmless to the eyes or if accidentally swallowed

**As used in the London Bombings**

Code	Description	Size	Cat.	Price £
642-D8094	Water-Jel Face Mask	30x40cm	D	26.50

### Water-Jel BurnJel

#### Soothing gel in three handy sizes

- Offers soothing relief for minor burns, cuts and scrapes
- Ingredients include purified water, glycerine and tea tree oil
- Immediate application to the burn site starts the cooling process instantly and stops the burn progressing through healthy tissue
- Also provides a protective barrier to guard against contaminants and irritants that may delay healing times
